Flexible baby bottle liners come in several different sizes.

Advance scope through liner and lubricate outside of liner well.

Liner will collapse as it is advanced through the esophagus.

Once in the stomach, use rat tooth retriever or alligator jaw retriever to manipulate liner and secure foreign body inside liner.

Attach suture in 3 spots to facilitate removal from stomach. One end of each suture remains outside mouth.

Use sutures outside mouth to remove from stomach.

Keep an eye out for new advances from ESS using this concept.
